

SCRUM-43

Manual UI Testing Report

Project Name: SkillBridge
Sprint: Sprint 1
Task ID: SCRUM-43
Test Type: Manual UI Testing
Platforms: Android and iOS

01. Task

Perform manual UI testing on both iOS and Android environments to detect layout overflow issues.

2. Objective

The objective of this testing was to manually verify the user interface of the SkillBridge mobile application on both Android and iOS environments. The testing focused on the Login, Registration, and Profile screens to identify layout overflow, component overlapping, alignment, spacing, and responsiveness issues.

3. Test Scope

The following screens were selected for manual UI testing:

- Login Screen
- Registration Screen
- Profile Screen

Each screen was tested on both Android and iOS environments.

4. Areas Checked

During the manual UI testing, the following areas were checked:

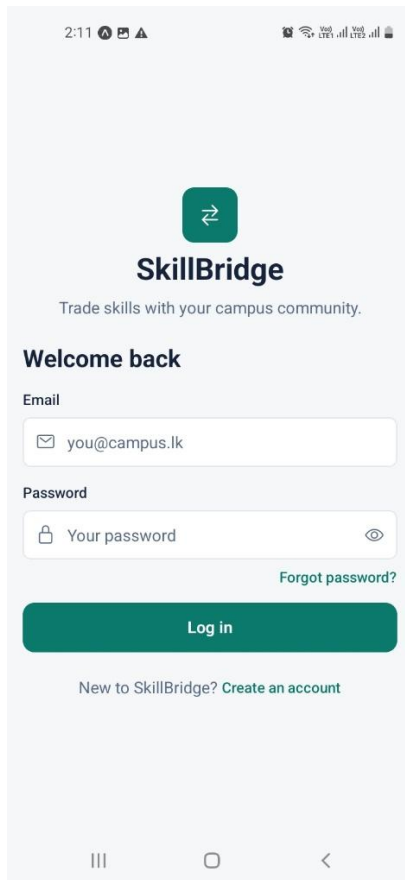

- Text overflow
- Input field overflow
- Button overflow
- Component overlapping
- Text and component alignment
- Spacing between UI components
- Screen responsiveness
- Scrolling behavior
- Navigation component positioning
- Overall UI consistency between Android and iOS

5. Test Results

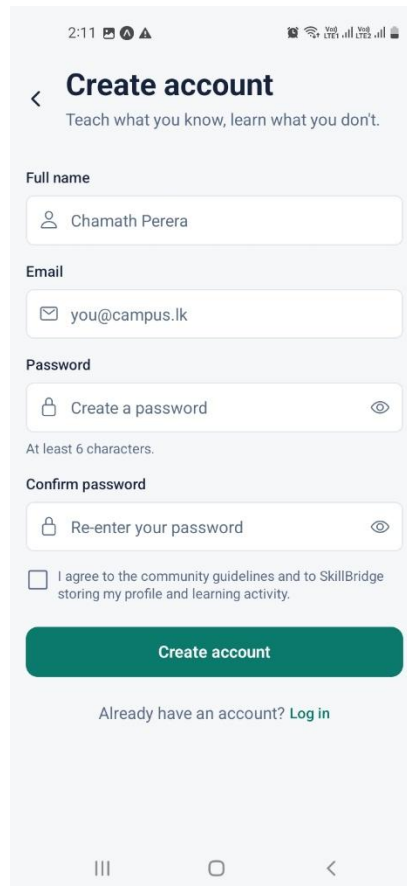

Test ID	Screen	Platform	Test Area	Result	Remarks
UI-01	Login	Android	Layout & Overflow	Pass	No layout overflow detected
UI-02	Registration	Android	Layout & Overflow	Pass	Fields and buttons displayed correctly
UI-03	Profile	Android	Layout & Alignment	Pass	Profile components and navigation displayed correctly
UI-04	Login	iOS	Layout & Overflow	Pass	No layout overflow detected
UI-05	Registration	iOS	Layout & Overflow	Pass	Fields and buttons displayed correctly
UI-06	Profile	iOS	Layout & Alignment	Pass	Profile components and navigation displayed correctly

6. Android UI Test Evidence

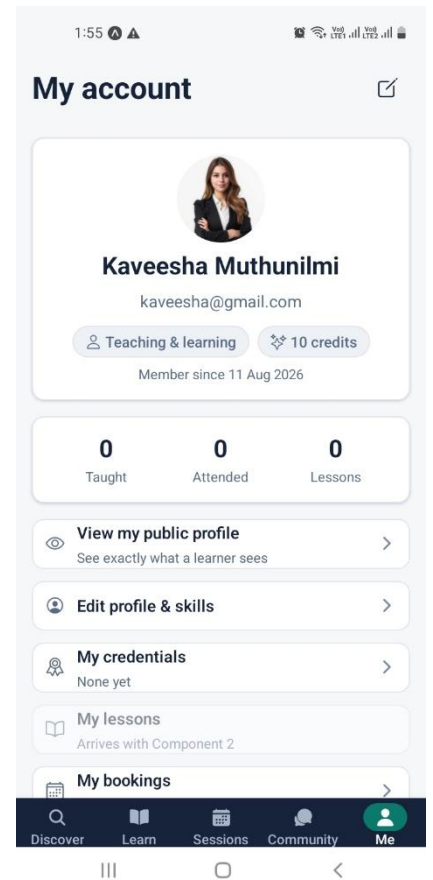

The Login, Registration, and Profile screens were manually tested in the Android environment. The screens were checked for layout overflow, overlapping components, alignment, spacing, and responsiveness.

Login Screen

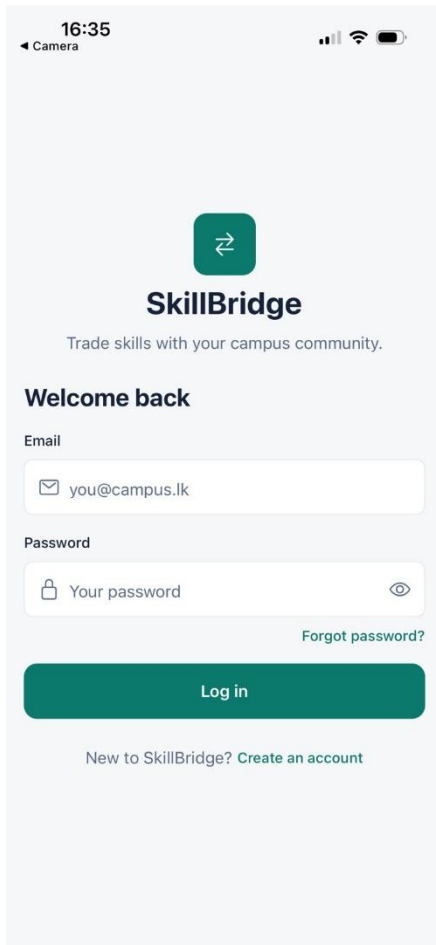

Registration Screen

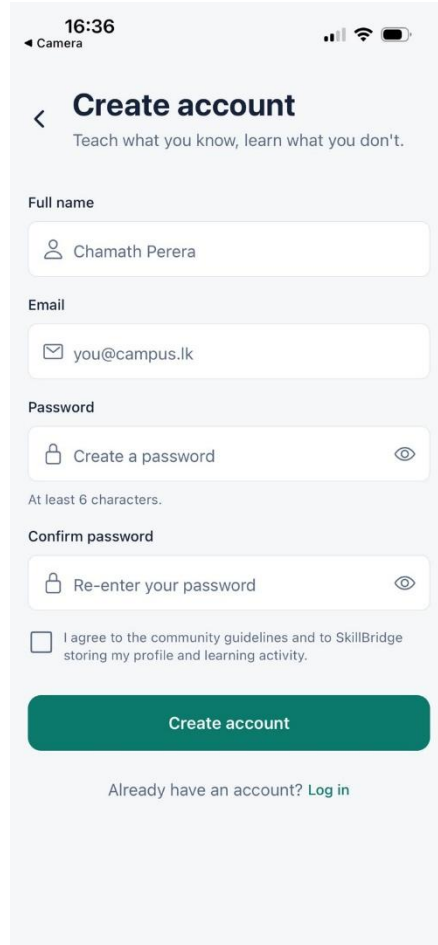

Profile Screen

7. iOS UI Test Evidence

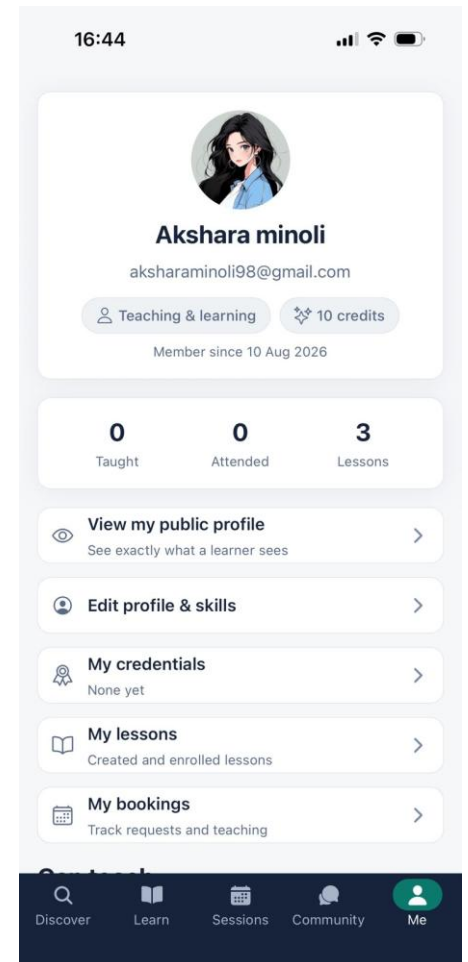

The same three screens were manually tested in the iOS environment to verify UI consistency and identify platform-specific layout overflow issues.

Login Screen

Registration Screen

Profile Screen

8. Cross-Platform Observation

The Login, Registration, and Profile screens were compared across Android and iOS environments. The tested UI components maintained appropriate alignment, spacing, and responsiveness on both platforms. No major platform-specific layout overflow issues were identified during the manual testing.

9. Test Summary

Total Test Cases: 6

Passed: 6

Failed: 0

Overall Result: Pass

The three selected screens were successfully tested on both Android and iOS environments. No major layout overflow or component overlapping issues were identified during the testing.

10. Conclusion

Manual UI testing was successfully performed on the Login, Registration, and Profile screens of the SkillBridge application using Android and iOS environments. The testing focused on layout overflow, component alignment, spacing, responsiveness, and overlapping elements.

Based on the completed test cases, all six tests passed successfully, and the tested screens maintained a consistent and usable interface across both platforms.
